

Please use common sence and good engineering thought before going a head with BPL. I as a radio amateur would hope that the hf frequincies involved will not become subject to interferance that could be prevented by using simple common sence and not let the greed of industry and the lack of engineering prowess by the FCC create a problem that can not or will not be adresssed in the foreseeable time to come.

Please THINK, BEFORE A HUGE PROBLEM IS CREATED, that will be hard to correct.

thank you
